

Toronto Ct. 83 100th iron-on patches, ironing instructions

From - <https://www.patches.co/us/patches-backing>

Iron-on backing attaches the patch to the fabric by applying heat and ironing with pressure. Usually used on denim and cotton, do not use iron-on backing patches on towels, leather, polyester, nylon, and corduroy. Also, do not use this type of backing on fabrics with a rough surface. If it is used for hats, it will be better to use a hat press rather than an iron. Or the patch will be heated unevenly and cannot be firmly attached.

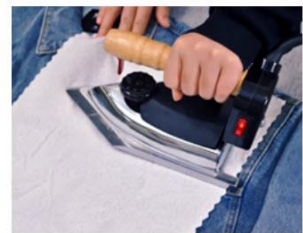

Step 1
Iron the garment

Step 2
Put on the patch

Step 3
Place damp cloth over patch

Step 4
Iron the patch

Notes re iron-on-

Advantages – Quick application, strong adhesion

Disadvantages - Adhesive weakens over time with repeated washing temperature drying in a washing machine.
